

10 Things You Might Not Know **About Power Restoration**

Matt Hotzler Manager

Have you ever watched a video or TV show where a person is cooking a meal, then suddenly, they snap their fingers, and the meal is plated and ready to eat? That's called a jump cut.

While we wish we could "jump cut" from a power outage to power restoration, it can often take much more effort and people to make it happen.

As the General Manager of H-D Electric Cooperative, I'm accustomed to members' questions about power outages and why it can take time to get the lights back on. Given our reliance on electricity, there's never a good time to be without it.

This month, I'd like to shed light on our restoration process to help our members understand what may be happening behind the scenes. Here are ten things you might not know about restoration:

- We need you. It might be at your home or a small area when your power goes out. There is a chance we may not know about it, and no one has reported it. We rely on you to let us know if your power is out. Call 605-874-2171 to report
- Our employees might be affected too. Because H-D Electric is a local electric cooperative owned by the members we serve, our employees are local, too. They are your neighbors, friends, and familiar community volunteers. When you're without power, our people might be too.
- **It's a team effort.** During major events, all H-D Electric's employees work to restore your power as soon as possible. Besides those repairing the lines, our office staff are taking your calls, engineers and other field staff are surveying the damage, and others are evaluating and planning restoration efforts. When your power goes out, we all work together quickly and safely to get you back to normal.
- We assess the situation first. Every outage is different; we don't know how dangerous it is or what equipment might need repair. When responding to outages, we first need to see what happened, then figure out what materials we need and a plan to fix the problem(s) without compromising electric flow for the rest of our members.

- Restoration is normally prioritized by the largest number of members we can get back on in the shortest amount of time. Our crews focus on responding first to public safety issues. Then, we complete work that impacts the largest number of people first.
- Our employees face many dangers. Besides working around high-voltage electricity, our crews are on alert for weather elements, falling trees, and fast-moving cars. (If you ever drive past one of our vehicles, please do so slowly.)
- Flickering lights are a good thing. Some folks mistake flickering lights for outages, but these "blinks" are important because they indicate our equipment worked and prevented a possible outage likely caused by wayward animals or stray tree limbs on the lines.
- You need a backup plan. We do our best to help those who need it, but if you depend on electricity for life support purposes, you must have a backup plan - remember, we don't always know how long restoration efforts will take.
- Our employees have to plan and eat. If you ever see our trucks stopped while your power is out, know that sometimes our employees huddle in a safe, common area to map out their plan for getting your power back on. Also, our crews work long, hard hours during outages and must take time for meals just like everyone else.
- 10. Sometimes it's a waiting game. Our portion of the power grid is connected to other electric utilities, and we maintain positive relationships with power providers interconnected to our system. If our outage is due to an issue from their feed into our system, we must let them do their repairs and be mindful of what they're going through to fix it.

We do our best to avoid power disruptions, which are inevitable occasionally. If the lights go out, know that your co-op team works quickly and safely to restore power. If you experience an outage, please inform us by reporting it through a call at 605-874-2171.

Have a great and safe July 4th Holiday.

COOPERATIVE

CONNECTIONS

H-D ELECTRIC

(USPS No. 018-905)

General Manager: Matt Hotzler **Headquarters Employees:**

Annie Aberle - Finance and Administration Manager Michelle Prins - Billing Clerk Heidi Brewer-Grimlie – Accounting Clerk Jami Bolden - Receptionist/Cashier Roger Cutshaw - Engineer Darren Matthies - Building Property Worker

Operations:

Troy Kwasniewski – Operations Manager Todd Sprang – Line Foreman Line Crew:

Pat Kirby - Operations Support Joe Raml - Lead Lineworker Cody Scarrott - Lineworker Derek Bille - Lineworker Kevin Holida - Lead Lineworker Matt Miller - Lead Equipment Operator/ Mechanic

Joseph Jordan Jr. - Apprentice Lineworker Eric Page - Apprentice Lineworker Brady Mellendorf - Equipment Operator/ Mechanic

Member Services:

Tom Lundberg - Member Services Noah Reichling – Electrician Foreman

Jim Thompson – Lead Electrician Deaven Boots - Apprentice Electrician

Board of Directors:

President Bert Rogness - Astoria Vice President Terry Strohfus - Hazel Secretary Roxanne Bass - Castlewood Treasurer Steven Hansen - Clear Lake Dale Williams - Estelline Casper Niemann - Lake Norden Kevin DeBoer - Clear Lake Calvin Musch - Revillo Todd Moritz - Clear Lake

H-D ELECTRIC COOPERATIVE CONNECTIONS is published monthly by H–D Electric Cooperative, Inc., PO Box 1007, 18240 SD Hwy 15, Clear Lake, SD 57226-1007 for its members. Families subscribe to H-D Electric Cooperative Connections as part of their electric cooperative membership. H–D Electric Cooperative Connections' purpose is to provide reliable, helpful information to electric cooperative members on matters pertaining to rural electrification and better rural living. H–D Electric Cooperative is an equal opportunity provide and employer

Subscription information: Electric cooperative members devote 50 cents from their monthly electric payments for a subscription. Nonmember subscriptions are available for \$12 annually. Periodicals Postage Paid at Clear Lake, S.D., and at additional mailing offices. POSTMASTER: Send address changes to: H–D Electric Cooperative Connections, PO Box 1007, Clear Lake, SD 57226–1007; telephone (605) 874-2171; toll-free1-800-358-7233; fax (605) 874-8173; e-mail info@h-delectric.coop Design assistance by SDREA.

\$384,666 in Taxes Supports Area Schools

H-D Electric, along with our power suppliers, Basin Electric Power Cooperative and East River Electric Power Cooperative, paid \$384,666 in gross kilowatt hour taxes for the Schools in Hamlin, Deuel, Brookings, Grant, Clark and Codington counties.

Breakdown of taxes paid are as follows:

III	¢220,000
Hamlin County Schools	\$228,909
Deuel County Schools	\$137,777
Brookings County Schools	
Codington County Schools	\$6,715
Clark County Schools	
Grant County Schools	

These taxes are in addition to property and payroll taxes paid by your cooperative. Despite being a nonprofit organization, your cooperative has many tax obligations. However, it enables us to demonstrate one of our core values and have a positive impact in the communities we serve.

PAYMENT OPTIONS

H-D Electric Offers different payment options for your convenience to pay your bills at any time of day, night or on the weekend.

Pay by Phone using our automated phone system.

Call H-D's phone number 605-874-2171 or 800-358-7233

- During office hours, we will transfer you to the automated system
- After hours, holidays and weekends, choose Option 2 to make a payment
- You need to have your account number available and your VISA, MasterCard or Bank Account information.

SmartHub

- Sign up using your email address and account number
- View and pay your bills, view energy usage, manage notifications and contact
- Go to www.h-delectric.coop and click on 'SmartHub: Manager Account'

One-Time Payment Online - Pay Now

- Easily pay your bill with no registration required
- Use your billing account number and last name to access your account for
- Go to www.h-delectric.coop and click on 'SmartHub: Pay Now!'

Recurring Bank Draft or Credit/Debit Card

Hassle-free way to pay your bill each month. Sign up and your payment is automatically deducted from your bank account or credit card on the 15th of each month.

Drop Box

We have a drop box located on the north end of the east parking lot at our Headquarters south of Clear Lake.

Mail

You can mail a check to our address: PO Box 1007, Clear Lake, SD 57226

Operating Statistics		
	April 2023	April 2024
Customers	3,779	3,838
Amount Collected	\$1,048,860	\$980,661
Average Bill	\$277.55	\$255.51
Average Kilowatt-Hour	2,385	2,329
Kilowatt-Hours Purchased	9,278,361	9,445,829
Kilowatt-Hours Sold	9,012,276	8,937,533

Fireworks Safety

Summer is synonymous with barbecues, parades and fireworks. The National Safety Council advises everyone to enjoy fireworks at public displays conducted by professionals, and not to use any fireworks at home. They may be legal but they are not safe.

Every year, thousands of people are injured badly enough to require medical treatment after fireworks-related incidents, with many of the injuries to children and young adults. While the majority of these incidents are due to amateurs attempting to use professional-grade, homemade or other illegal fireworks or explosives, less powerful devices like small firecrackers and sparklers can also cause significant injury.

Additionally, fireworks start an average of 19,000 fires each year.

Fireworks Safety Tips: If You Choose to Use Legal Fireworks

If consumer fireworks are legal to buy where you live and you choose to use them, be sure to follow the following safety tips:

- Never allow young children to handle fireworks
- Older children should use them only under close adult supervision
- Never use fireworks while impaired by drugs or
- Anyone using fireworks or standing nearby should wear protective eyewear
- Never hold lighted fireworks in your hands
- Never light them indoors
- Only use them away from people, houses and flammable material
- Never point or throw fireworks at another person
- Only light one device at a time and maintain a safe distance after lighting
- Never ignite devices in a container
- Do not try to re-light or handle malfunctioning fireworks
- Soak both spent and unused fireworks in water for a few hours before discarding
- Keep a bucket of water nearby to fully extinguish fireworks that don't go off or in case of fire
- Never use illegal fireworks

Better yet, grab a blanket and a patch of lawn, kick back and let the experts handle the fireworks show.

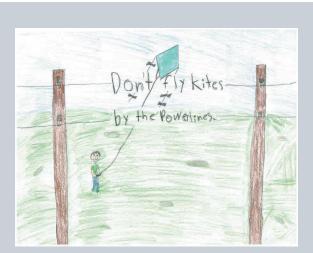

Sparklers Are Dangerous

Every year, young children can be found along parade routes and at festivals with sparklers in hand, but sparklers are a lot more dangerous than most people think.

Sparklers burn at about 2,000 degrees - hot enough to melt some metals. Sparklers can quickly ignite clothing, and children have received severe burns from dropping sparklers on their feet. According to the National Fire Protection Association, sparklers alone account for more than 25% of emergency room visits for fireworks injuries. For children under five years of age, sparklers accounted for nearly half of the total estimated injuries.

Consider using safer alternatives, such as glow sticks, confetti poppers or colored streamers.

"Let's Go Fly a Kite Up to the Highest Heights."

Eldon Femrite, Age 12

Eldon Femrite warns readers to not fly kites by power lines this summer. Eldon's parents are Jody and Rosemary Femrite, members of Codington-Clark Electric.

Kids, send your drawing with an electrical safety tip to your local electric cooperative (address found on Page 3). If your poster is published, you'll receive a prize. All entries must include your name, age, mailing address and the names of your parents. Colored drawings are encouraged.

Signs Your HVAC is in Trouble

Miranda Boutelle **Efficiency Services** Group

Q: How do I know if my HVAC system is malfunctioning?

A: Your heating, ventilation and air conditioning system is one of the most important and expensive systems in your home. Detecting issues early can help you plan for repairs or equipment replacement.

Equipment functionality issues can affect your electricity use, which may result in higher energy bills. The age of your equipment can be a major factor in function. The lifespan of a heating and cooling system ranges from 15 to 20 years.

Proper maintenance and lower use can increase the life of the equipment. To find out the age of your system, look for the manufactured date printed on the unit's nameplate. If you can't find it, search online using the model number or call the manufacturer.

Being thrifty by nature, I typically subscribe to the notion of "If it ain't broke, don't fix it." That said, I also believe in being prepared for the inevitable. If your system is approaching or past the 20-year mark, start saving for a new system and get replacement estimates.

There are a few warning signs to watch out for if your heating and cooling system needs to be repaired or replaced:

- Air conditioning is not as cool as usual. If the air from your air conditioner is warm or not as cool as it usually feels, the equipment has an issue. It could be a problem with the compressor or a refrigerant leak. Contact a professional to get the issue checked. Many refrigerants, especially the ones used in older systems, are harmful to the environment. Fix leaks before adding more refrigerant. Special certifications are required for handling refrigerants, so hire a professional to ensure the work is done properly.
- Low airflow. If you aren't getting good airflow, it could be an easy fix, such as filter replacement or opening closed dampers. If you've made these fixes and airflow is not at normal levels, contact

- a professional. There could be a bigger problem with a motor, fan or something
- Bad odors. Heating and cooling systems sometimes smell when you first start them up for the season. Those smells should be minor and dissipate quickly. Any serious smells – such as burning metal, melting plastic or noxious odors are a sign that your system is in trouble. If you smell those odors, turn your system off immediately and contact a professional.
- Strange noises. There is typically noise associated with the fans and motors in heating and cooling systems. Take note of any excessive or new noises. If your system is making any clunking, clanging or whistling noises, turn it off and check the filter. If that doesn't solve it, reach
- Running frequently. Your system needs to run more to keep up on extreme weather days, but there might be an issue if it runs too often. Short cycling is when a system cycles on and off before completing the heating or cooling process. Contact a professional to diagnose this issue.

Several factors come into play when deciding to fix existing equipment or invest in new equipment. Consider the severity of the issue, repair costs, the likelihood of additional repairs, equipment lifespan and your budget.

The efficiency of your existing system is also a consideration. Heating and cooling technology improvements have come a long way in the last 20 years. Lower operation costs can offset the cost of a new system over time.

Consider your options before you are in desperate need. I recommend getting estimates from at least three contractors. Ask the contractor, "If this was your home, what type of system would you install and why?" The best solution for your home might be a different type of equipment.

From East River to Missouri River

Tom Boyko's 2,400-Mile **Canoe Journey**

Frank Turner

frank.turner@sdrea.coop

What's a former CEO of East River Power Cooperative to do after they retire? For Tom Boyko, retirement after 37 years in the electric industry and serving nine years as East River's chief executive officer meant an opportunity to embark on a well-earned canoe odyssey from the headwaters of the Missouri River in Three Forks, Mont., to St. Louis, Mo., with his son, Jacob Boyko, who accompanied his father for a portion of the journey.

According to Boyko, the 2,400-mile trip had been brewing in his mind for a long time, so when he retired at the end of August 2023, he wasted no time planning and executing his adventure, jumping from his cozy office chair to his canoe in just six months.

"I grew up on the Missouri in Stanton, N.D., so I've been wanting to do this trip forever," said Boyko. "It's just something I've always wanted to do."

Boyko continued, "At first, my family didn't think I would follow through. But through the winter, I built a tank so I could sit and practice paddling, day after day. Then they realized I was going to do it. My wife and daughter actually drove Jacob and I out to Montana. They weren't sure I was going to make it all the way, and they thought we might call it quits, but we didn't."

Having read the journals of Lewis and Clark, Boyko wanted to follow in the pioneering duo's footsteps along the Missouri River. However, instead of relying on the historic travelers' accommodations, Boyko took a more modern approach to his journey with modern provisions, including a canoe packed to the brim with packets of chicken and tuna, boxes of mac and cheese, a valuable cache of instant coffee, a tent, two propane stoves, and many other supplies.

"I got ahold of David Miller's book, The Complete Paddler, and he really went through, step-by-step, what he experienced when he went down the Missouri River," said Boyko. "He logged the locations of the campgrounds and included a lot of great information, so it was a great book to have with."

Armed with the knowledge to navigate hordes of flies and mosquitos, unpredictable summer storms, and the channels of the Missouri River, Boyko launched his expedition on May 16 with his son, who had just graduated college with a degree in Journalism from South Dakota State University. Jacob had also just won a Pulitzer fellowship for a writing project about the Matanza Riachuelo River in Buenos Aires, Argentina. As a result, Jacob left the Missouri River expedition in Williston, N.D., to explore his own river-centric journey in Argentina. The rest of the trip, Tom tackled solo.

"When you get to be a dad like me, you just so appreciate the

Tom Boyko stands with his son, Jacob, at Tobacco Gardens Resort & Marina, a campground in McKenzie County, N.D. Photo submitted by Tom Boyko.

opportunity to do something like this with your son," said Boyko. "He enjoyed it, and he plans to finish the trip at some point in his life. And the cool thing is that every guy my age I met on the trip said the same thing, 'I wish I could have done that with my son.' I was very fortunate, and I very much appreciate that he came with me."

Although Boyko tackled most of the trip by himself, he did have help along the way. Boyko received help from family, friends, and co-workers from the co-op industry when portaging his canoe over the many dams along the way.

"My brother portaged me around Garrison Dam," said Boyko. "Jordan Lamb, the general manager of Oahe Electric, helped me portage Oahe Dam. Russell Gall with Charles-Mix Electric and Ervin Fink, a former director of East River, helped me through Fort Randall. Stephanie Horst with Bon Homme Yankton paddled Lewis and Clark Lake with me. Even my family came down and to help me portage Gavin's Point. It was great to see friends and family along the way."

Even bolstered by the help of friends, the trip wasn't always smooth sailing. Over the course of his 98-day journey, Boyko traversed strong winds and high waves on Lake Oahe, which forced him to ground his canoe and camp along the beaches of the reservoir. He drifted through oppressive 114-degree heat in Missouri and navigated past large barge traffic. There was even a rowdy raccoon who helped himself to some mac and cheese - all part of the

"I started packing the canoe when it became evident that a raccoon had been in my canoe during the night and ate through one of my food dry bags leaving mac and cheese noodles and orange cheese throughout the boat," wrote Boyko in his travel journal.

But it wasn't all bad. Boyko said he met some great people and found some real gems along the way.

"I worked for the Western Area Power Association for many years, so I was very familiar with the river and the dams... but when you are actually canoeing it, you get a different appreciation," said Boyko. "It's a beautiful river."

Let's Go Fly a Kite

Shannon Marvel

shannon.marvel@sdrea.coop

The sky becomes more of an art canvas during the Brookings Kite Festival. For the last 25 years, kite fliers from across the country gather to let their art take flight at the festival.

One of those artists is Mike Gee of North Dakota.

"We go down there to Brookings and really like the kite flying field there. It's just nice to come down and fly kites with friends who also enjoy flying kites," Gee said.

Gee flies what's called "show kites", which are big, inflatable kites that can span 20 feet across the sky.

There are other kites flown during the festival, including soft kites, stick kites and sport kites.

A sport kite is one that is attached to two or four lines. Often they'll be flown in teams and perform maneuvers in the sky.

"If you talk about crazy kites, there's a wide variety. There are so many different creative people building things in creative ways," Gee said. "It is definitely an art. It's what you put on the canvas that makes it special."

The kites are typically made with nylon, sail making cloth that doesn't stretch.

"You can't just go to the fabric store and buy tent fabric. We have a couple different weights of fabrics we use. And you need that tail on there to keep the kite stable," Gee said.

Sally Damm Norby, of the Brookings Optimists Club, said the festival got its start when Lynn Versher, former director of the South Dakota Art Museum, approached Optimist member Bill Flynn about creating a joint effort to bring big kites to Brookings.

"This volunteer organization aims to make a positive impact on the lives of youth and communities. The Brookings club's primary focus is on advancing the opportunities and programs for youth events that are encouraging with exceptional supportive outcomes. The Brookings Optimist Kite Festival offers a comprehensive learning experience that incorporates expressions of culture, science, creativity, civic involvement, and is environmentally friendly," Norby said.

Youth are encouraged to come down and learn how to make a kite of their own, with professional guidance.

Gee said he encourages visitors to come up to kite fliers to ask questions or strike up a conversation.

"One thing I really like about kite flying is it seems like no matter who you talk to on the field, someone can relate to an experience of flying a kite," Gee said. "When we start flying kites, it brings back memories of when other folks were kids flying kites. It's kind of emotional for some people."

This year's event will take place on June 22-23 at the Fishback Soccer Park in Brookings.

Gee said this location is a safe spot to fly kites, and well away from any electrical line hazards.

"If you've flown kites long enough, you have a story about power lines. When you hit a line, you call the power company, and they advise you of what to do. The best thing to do is avoid those wires. I always think, 'If my line breaks, which way is my kite going to go and what's over there," Gee said.

Gee encourages visitors to come down to the Brookings Kite Festival with their lawn chairs and blankets and stay for more than just a half hour.

"The thing is when the wind changes direction or speed, the kites change. There's just so much going on throughout the day. You've really got to sit back and pay attention," Gee said.

H-D Electric came together with Deuel School for a coloring contest for National Electrical Safety Month. The grades that participated in the coloring contest were PM Preschool, Junior Kindergarten and First Grade. On May 13, Tom Lundberg went and talked with the kids about electric safety and presented the gift to the winner of each class.

Two Temporary 1,000-hour Lineworkers Join Crews

With summer construction projects in full swing, H-D Electric hired Chris Mayer and Jonah Painter to join the Operations Department in May. Chris calls his hometown Mount Vernon, S.D. He graduated from Mitchell Technical College in Mitchell, S.D., with a degree in Power Line Construction and Maintenance. Some of his hobbies are hunting, fishing, golfing, and camping. You can see him on his spare time golfing on different courses around the area he is in. Chris is part of the South Dakota Army National Guard.

Jonah calls his hometown Breckenridge, Minn. He graduated from Minnesota State Community and Technical College in Moorhead, S.D., with

a degree in Electrical Line Worker Technology. Some special skills he has are paying attention to details and being safe and other hobbies include hunting and fishing, and enjoying outdoors (fishing, golfing, and camping). Jonah is a volunteer at his local Trap Shooting Club.

Co-ops in the Classroom **Exploring Energy**

Co-ops in the Classroom is a program offered by H-D Electric and H-D Electric's wholesale power provider, East River Electric Power Cooperative.

In April, H-D Electric's Tom Lundberg, Member Service Manager, and East River Electric's Jennifer Gross, Education and Outreach Coordinator, brought this energy education to 4th and 5th grade students in the Castlewood, Deuel, Hamlin, and Deubrook Schools in H-D Electric's territory. They reached out to around 235 kids.

A variety of hands-on demonstrations in this program are designed to help children learn the importance of respecting electricity, how to be safe around electricity and recognize where electricity comes from.

A question-and-answer session from the 4th and 5th grade students completed the program.

Know How to Stay Safe From Lightning Strikes

A rainy day can all too quickly turn into a disaster when thunder and lightning are present. The high level of voltage in lightning is not something with which to take chances. Knowing how to stay protected in a storm is key to preventing a tragedy and costly injuries.

There is no safe place from lightning when you are outside. The best way to stay safe from the threat of lightning is to stay inside and avoid interacting with any appliances, electrical outlets and wires, cables, phone lines, water, and piping.

Preparation is also important. Listen to, watch, or download weather forecasts so that you know if there is a chance of severe weather. If there is a chance, reschedule the activity or make sure you can get to a safe location if a thunderstorm develops. Safe shelters are in fully enclosed buildings or in a fully enclosed metal-topped vehicle.

Open vehicles, such as convertibles, motorcycles, and golf carts, are not safe. Open structures - such as porches, gazebos, pavilions, and baseball dugouts - are not safe either.

Before the thunderstorm, turn off or unplug corded appliances, stay away from television sets, and do not depend on surge protectors to absorb a lightning strike. Turn off your air conditioner to help protect the compressor from a potential power surge and costly repairs from the storm.

Also, during the thunderstorm, do not lie on concrete floors and avoid leaning on concrete walls. Lightning can travel through any metal wires or bars in concrete walls or flooring.

After a storm, wait until 30 minutes have passed without lightning or thunder before returning outside. Lightning can strike up to 10 miles from the area in which it is raining. If a person is struck by lightning, call 911 and care for the victim immediately. You are not in danger of being shocked or electrocuted by the victim.

The potential long-term effects of a lightning strike can be just as brutal as the accident itself, so take precautions. Check weather forecasts, and plan to be inside a safe shelter. For more information, visit SafeElectricity.org.

Military Appreciation at Crystal **Springs** Rodeo lune 29

Seventy-eight years ago Clear Lake Rancher E.W. Wiesel had a dream. He wanted to turn a duck pond on his Crystal Springs Ranch into a rodeo arena. The sloping hills surrounding the pond would be perfect seating for spectators. The duck pond was drained of the water and the arena was built. The first performance was held the next year in 1946 and there has been a performance every year since. The Crystal Springs Rodeo is part of the Badlands Rodeo Circuit which Touchstone Energy is a major sponsor. (Information taken from the Crystal Springs web site)

On Saturday, June 29, **Touchstone Energy Cooperatives:** H-D Electric along with Codington-Clark Electric, Whetstone Valley Electric, Lyon-Lincoln Electric, and East River Electric Power Cooperative will be sponsoring the Touchstone **Energy Military Appreciation** Night.

- **Employees and directors** from local electric cooperatives will be greeting rodeo guests at the gates during Saturday's Military Appreciation Night performance and will hand out special gifts to the children.
- We look forward to seeing you!

Roger Lawien

More than 40 cooperative linemen and metering specialists gathered in Pierre for South Dakota Rural Electric's Meter School. This two-day gathering offers the opportunity to enhance skills, build a community of professionals, and learn the nuances of metering. As our need for more energy continues to grow, so does how we properly meter consumption.

Modern electric meters do much more than keep track of the electricity we consume. Correct electric metering is also essential for grid reliability and stability. Accurate measurements aid your cooperative in identifying and addressing issues such as voltage fluctuations or load imbalances promptly.

This proactive approach enhances the resilience of the electrical grid, reducing the likelihood of outages and ensuring a continuous and reliable power supply. At its core, accurate metering ensures fair and precise billing, preventing financial disputes and establishing trust between cooperatives and members.

From an economic standpoint, correct electric metering plays a pivotal role in resource allocation allowing member owned cooperatives to better understand consumption patterns, enabling them to optimize energy distribution and invest strategically in infrastructure development. This, in turn, leads to more efficient operations, cost savings, and improved overall service quality.

Precise metering supports energy conservation.

Members can sign into their account online, view consumption. Armed with accurate usage data they are empowered to make informed decisions about their energy consumption. This encourages responsible energy usage practices, reducing waste and lowering overall demand.

Metering guru and instructor John Pollard said it best. "These training schools are important. Metering is a craft handed down from generation to generation. With the advances of solid-state metering, these students are the supreme candidates to lead us into the future."

Your electric cooperative is your partner in getting it done!

2023 SDREA Meter School Instructors Photo by Roger Lawien

What is a Smart Meter?

A smart meter is a common term for Automated Metering Infrastructure, or AMI. These are connected devices that transmit information back to the electric utility's meter data management system and the information collected is used primarily for billing and outage response purposes. Smart meters started to be installed about 25 years ago. Individual utilities have different aged systems, but all electric cooperatives in South Dakota have two-way communication with every meter in the system.

What advantages do Smart Meters bring?

Before smart meters were installed, customers were required to read their own analog meter and report their monthly usage for billing purposes, or a utility employee would physically travel to every home, farm or business in their large service territories to read usage data. Smart Meters take the burden off customers and employees, saving time and money for all consumers. In some cases, the aggregated energy usage information from their home can be visible to the customer via the Internet or a phone application.

- Smart Meters can be used to pinpoint exact locations of power outages more quickly by transmitting an "out of power" notification, meaning a faster response time to outages.
- Smart Meters allow information to be shared with individual consumers about their energy usage – allowing them to find energy efficiency opportunities or potential problems in their home.
- Smart Meters improve electric service reliability and power quality. Information obtained from the automated meters often identifies problems that can be repaired before they cause an outage.
- Information can be used by engineers to more effectively and appropriately size lines and transformers, saving the cooperative and members money.

What information does a Smart Meter record?

Automated meters record an electronic kilowatt-hour (kWh) reading, the date and time of energy usage, the overall peak demand of the electric account, if the meter has been tampered with, and the number of times the meter has experienced a loss of power.

Security of information

Electric cooperatives do not sell or share consumer data. Cooperatives abide by all laws regarding the privacy, protection and disclosure of personal information. The meters and associated communications systems are equipped with security features to prevent unauthorized access.

Are there potential health impacts from a smart meter?

Research conducted by the Electric Power Research Institute (EPRI), the Utilities Telecom Council (UTS) and other similar groups have shown no health impacts from automated meters. The radio frequencies emitted by digital meters are well below the maximum recommended in federal guidelines. A digital meter equipped to send and receive data has an RF density hundreds of times lower than the RF density of a cell phone, and the meters are installed on the outside of homes or buildings.

The Legacy of Dick Davidson and the South Dakota Canoe and **Kayak Association**

Frank Turner

frank.turner@sdrea.coop

GOALS

To travel from South Dakota to the Arctic by canoe in one season. This is obviously no small challenge. If the season is giving, the added goals of reaching Alaska and even reaching both the Arctic Ocean (Beaufort Sea) and the Pacific Ocean (Bering Sea) would be added as noted later in 'Trip Segments'.

PARTY

A party of one in a solo canoe (at this time and likely during the trip).

All gear will be carried at the start of the trip and only replacement gear (hopefully none) will be purchased in route. The gear must and will serve in all conditions of the trip, including weather ranging from hot, sultry days to possible blizzard conditions, including canoeing circumstances like numerous whitewater ascents and great lakes travel.

Most food will be purchased in route. Resupply points will range from modern to basic. The incidence of points, after Lake Winnipeg, will range from several days to three or four weeks.

SUPPORT

None.

These are the original notes of outdoor activist and local canoe legend Dick Davidson, detailing his ambitious 1988 journey from South Dakota to the Arctic Circle by canoe. Embarking from Big Stone Lake, the 58-year-old from Sioux Falls attempted to paddle and portage his canoe 4,300 miles over several months through Canadian rivers and streams. Unfortunately, fires and drought in Manitoba prevented him from seeing reaching his goal. Even still, the ambitious journey captured Davidson's commitment to living a life dedicated to outdoor expeditions.

Davidson passed away in Sioux Falls in 2009, but his legacy and passion for canoeing live on through what is now known as the South Dakota Canoe and Kayak Association, a nonprofit outdoor recreation organization he founded in 1981. Unlike his solo adventures through the Canadian wilderness, Davidson established the association alongside several co-founders, canoes enthusiasts, and friends, including founding member Dave Greenlee of Sioux Falls.

Although the group participated in races, canoe building, and conservation activism, Greenlee noted that the group mainly gathered mostly "for the sheer fun of canoeing."

But they weren't just enthusiasts, this group of committed canoers were fanatics, appealing to all types of canoers from time-tested adventurers like Davidson to the casual outdoor enthusiast. Many of the founding members of the club would look for any opportunity to canoe, even taking to streams in near-freezing temperatures.

"Sometimes in the early spring season when the ice was still out, we would check the rain gauges after a quick rain to see if there was enough flow to enable a quick opening run for our canoes over the ice," said Greenlee.

Another founding member, Tom Behrend, recalled crafting his own canoes and paddles from scratch, often gifting his creations to friends and enthusiasts for just the cost of the supplies.

"I would hold a class every year on how to build a canoe," said Behrend. "A group of 10 to 15 of our members would meet every Thursday night in the winter time in somebody's heated garage. We would build these beautiful canoes with caned seats and all the goodies and then raffle them off once they were finished. It was a great way to raise money for the nonprofit."

For the less devout, the association offered events catered to amateurs, offering downstream floats and river-bound birdwatches. Greenlee recalled organizing an introductory canoeing instructional for blind individuals. The experience, he said, was incredibly rewarding, both the participants and the instructor had something to learn.

"I had been asked a couple of times to lead a canoeing instructional for the Girl Scouts," said Greenlee. "Then somebody said, 'We have a group of individuals who are visually impaired who want to learn what canoeing is like.' I was used to teaching young kids who just want to get out on the water and flail around and paddle, but this group was actually interested in learning about the canoe."

Greenlee continued, "I remember taking one of the individuals out onto the water and saying 'I'm going to turn to the left here and now we are facing West.' He said, 'I know that.' So, I asked, 'How do you know that?' And he said, 'I know the direction because I can feel the sun on my face.' How many times had I been in a canoe, looking at the shore and landmarks, but I never realized that I could close my eyes and tell which direction I was going by feeling the sun on my face... He was teaching me."

Today, the South Dakota Canoe and Kayak Association is still the state's premier paddling group, promoting safety,

education, conservation, and paddling outdoors. With roughly 100 members from across the state, the association centers around amateur paddling events, safety and outreach. Recent safety efforts include entry-level canoeing lessons and the association's recent WEAR IT campaign, which successfully installed more than 50 safety signs along recreation areas of the Missouri River encouraging kayakers and canoers to wear lifejackets.

"We host educational pool sessions across the state in Watertown and Sioux Falls where we practice falling out of the kayak and canoe and getting back in," said Pat Wellner, the association's current president. "It's all about encouraging safe practices while enjoying the outdoors."

Wellner encouraged outdoor enthusiasts of all levels to join the association by visiting the association's website at sdcka.org.

"Having the lakes and rivers of South Dakota is a great way to see the state from a different perspective that many don't get to see," said Wellner. "If anyone is interested in becoming a member, I would encourage them to check out the website, and when you are on the water, please wear a life jacket."
